

# Lake Erie Harmful Algal Bloom Forecast

2024-07-19

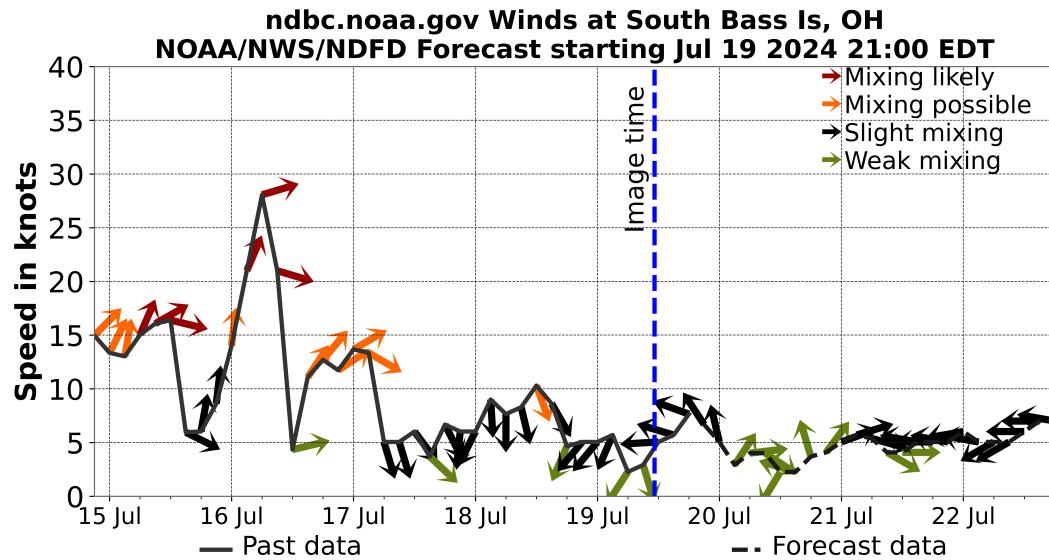

## Summary

The cyanobacteria bloom in western Lake Erie has an approximate area of 140 square miles, which is a decrease in area since Jul 13. The *Microcystis* bloom extends from Maumee Bay north to Pointe Mouillee State Game Area, MI and to the south to Magee Marsh Wildlife Area, OH and into the western basin towards West Sister Island. Sandusky Bay has a local bloom of mixed cyanobacteria. No recent toxin data currently available. --NCCOS HAB Forecasting Team 19 July 2024

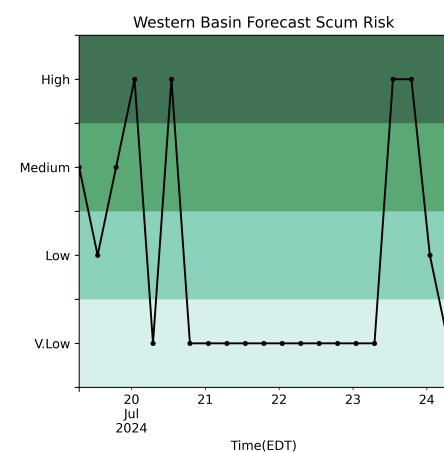

The past few days of imagery can be seen at [the HAB monitoring site](#). The Lake Erie Forecast is operated by the National Centers for Coastal Ocean Science. Contact hab@noaa.gov for technical Questions. Last Updated: 2024-07-19 09 PM EST

Current Lake Erie Sentinel-3 satellite imagery from the Ocean and Land Color Imager (OLCI) on Jul 19, 2024, showing bloom location and extent in the western basin. Grey indicates clouds or missing data. The estimated threshold of cyanobacteria detection is 20,000 cells/mL. Inset shows a truecolor image of the entire lake. Data derived from Copernicus Sentinel-3.

Wind speed and direction from SouthBassIs, OH. Blooms mix through water column at wind speeds > 15 knots.

Where the bloom is present in western Lake Erie, the potential risk of scum.

# Lake Erie Harmful Algal Bloom Forecast

2024-07-19

Forecast surface bloom position for Jul 20, modeled from the last satellite image with water currents estimated from the Lake Erie Operational Forecast System (LEOFS). Potential for bloom movement is forecast in 3-dimensions with a hydrodynamic model using satellite imagery and currents. The modeled output does not contain clouds. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.

Forecast surface bloom position for Jul 24. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.
