

# Lake Erie Harmful Algal Bloom Forecast

2024-08-12

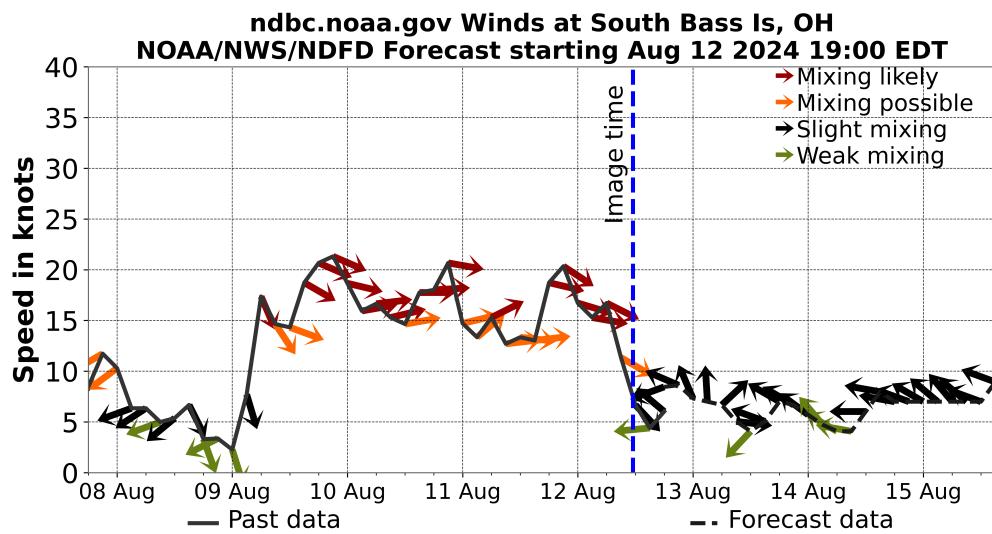

## Summary

The cyanobacteria bloom in western Lake Erie has an approximate area of 320 square miles, which is an increase in area since Aug 11. The bloom extends from Monroe, MI to Port Clinton, OH with some dense patches along Catawba Island extending into the western basin. There are also some dense bloom patches at the mouth of Sandusky Bay to Huron, OH. Sandusky Bay has a local bloom of mixed cyanobacteria. No recent toxin data currently available. --NCCOS HAB Forecasting Team 12 August 2024.

The past few days of imagery can be seen at [the HAB monitoring site](#). The Lake Erie Forecast is operated by the National Centers for Coastal Ocean Science. Contact [hab@noaa.gov](mailto:hab@noaa.gov) for technical Questions. Last Updated: 2024-08-12 09 PM EST

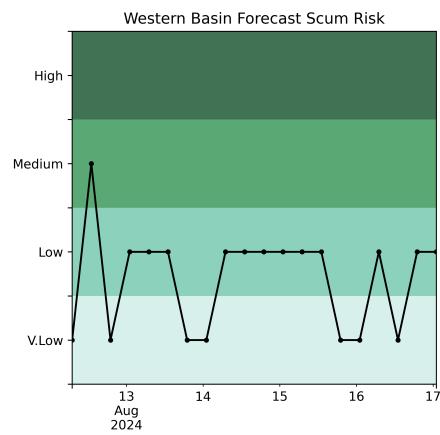

Current Lake Erie Sentinel-3 satellite imagery from the Ocean and Land Color Imager (OLCI) on Aug 12, 2024, showing bloom location and extent in the western basin. Grey indicates clouds or missing data. The estimated threshold of cyanobacteria detection is 20,000 cells/mL. Inset shows a truecolor image of the entire lake. Data derived from Copernicus Sentinel-3.

Wind speed and direction from South Bass Is, OH. Blooms mix through water column at wind speeds > 15 knots.

# Lake Erie Harmful Algal Bloom Forecast

2024-08-12

Forecast surface bloom position for Aug 13, modeled from the last satellite image with water currents estimated from the Lake Erie Operational Forecast System (LEOFS). Potential for bloom movement is forecast in 3-dimensions with a hydrodynamic model using satellite imagery and currents. The modeled output does not contain clouds. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.

Forecast surface bloom position for Aug 17. Black indicates the absence of chlorophyll and gray indicates area with no data. The arrows show forecasted currents. Water temperature and winds (in magenta) are the averages for the western basin from the model.
